"The quality of the IRIS photo affects the quality and result of the test. Please read the instructions below carefully," MY HEALTH NAVIGATION team

HOW TO TAKE A IRIS PHOTO?

To obtain an accurate result, the quality of the photograph is important, so we recommend using the following services:

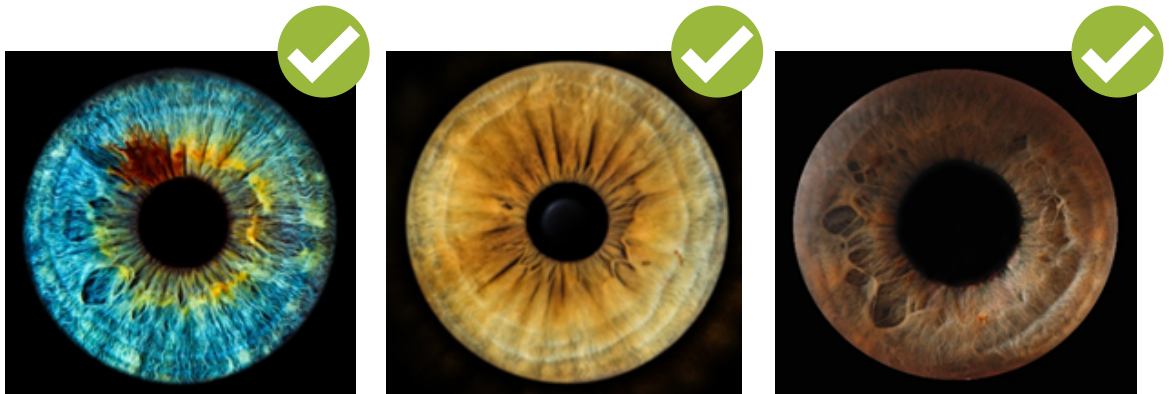

- A professional photographer (preferably with experience in similar photography)
- Professional photo studio
- Opticians or Clinics with the technical capabilities for this type of shooting

You can also take a photo yourself, but keep in mind that it is more difficult than you think!

WHAT SHOULD THE RIGHT PHOTO LOOK LIKE?

- The full circumference of the IRIS should be visible
- The drawing must be clear
- The pupil must be of minimum size
- IMPORTANT: The light source must fall on the pupil in the center, and not on the IRIS pattern
- There should be no glare in the IRIS pattern

WHAT DOES THE WRONG PHOTO LOOK LIKE?

- The entire circle is not visible
- Light falls on the iris

- Pupil too big
- The picture is not clear

- The picture is not clear
- Pupil too big
- Light falls on the iris

TECHNICAL REQUIREMENTS:

- Minimum size width X height: 2000 X 1500 pixels
